APPROVED FLOWER SEED NOVELTIES FOR 1940 GARDENS

AGERATUM (Floss Flower)

Valued as a free and continuous blooming plant for Summer gardens—plants that flourish with the least of care and in most any soil and location. Start indoors for early effects and outdoors in May for August display.

115 Midget Blue. Fancy a border but 3 to 4 in. tall with a true azure blue color and plants with a spread of 12 in.! Midget Blue is unquestionably the truest and most compact, dwarf Ageratum yet seen—a valuable variety for edgings, rock gardens and pots. Winner of a Silver Medal in the 1940 All America Selections and well worth your culture. **Pkt. 25c.**

EARLY GIANT ASTER

Unexcelled as long-stemmed cut flowers with superb lasting qualities. Seed sown outdoors as late as May should furnish plenty of September blooms.

632 Light Blue. One of last year's successes—customers report it disease-resistant and a color that improves with age. A glorified giant Crego with 5-in. flowers of an attractive light blue. **Pkt. 35c.**

634 Rose Marie. This year's wilt-resistant variety and a stunning one that we can highly recommend as a companion to Light Blue. A delightful rose-pink. Seed limited. **Pkt. 35c.**

HARDY DIANTHUS

Pinks of all kinds hold a high place in the esteem of gardeners everywhere for they prove so satisfactory under varied conditions and provide innumerable shades and colors in flowers that serve so well when cut.

2653 Allwood's Blue. A most remarkable shade of lavender blue and unique among flowers at the time of blooming—late Summer.

It resembles a Sweet-william in habit of growth yet is different in foliage and time of blooming. Blooms in seven to eight months from seed and is probably finest the second year if given a well-drained, sunny location. **Pkt. 50c.**

DELPHINIUM (Hardy Larkspur) PACIFIC GIANTS

Not since the introduction of the Hollyhock type some 15 years ago has any new variety created so much interest. Easily the largest type ever introduced and the center of attraction wherever shown. Practically 100 per cent double. Ideal cut and show flowers. Originator's Stock.

2527 Blue Jay Series. The finest dark blue shades yet found, the colors ranging from medium to dark blue with strongly contrasting bees. Very long spikes and quite disease-resistant. **Pkt. \$1.00.**

2530 Galahad Series. An enormous, clear, glistening white averaging 3 in. in diameter and of a heavy texture; the pyramidal spikes with well-spaced florets. On a par with the strongest and largest Delphiniums and excelling most of them. **Pkt. \$1.00.**

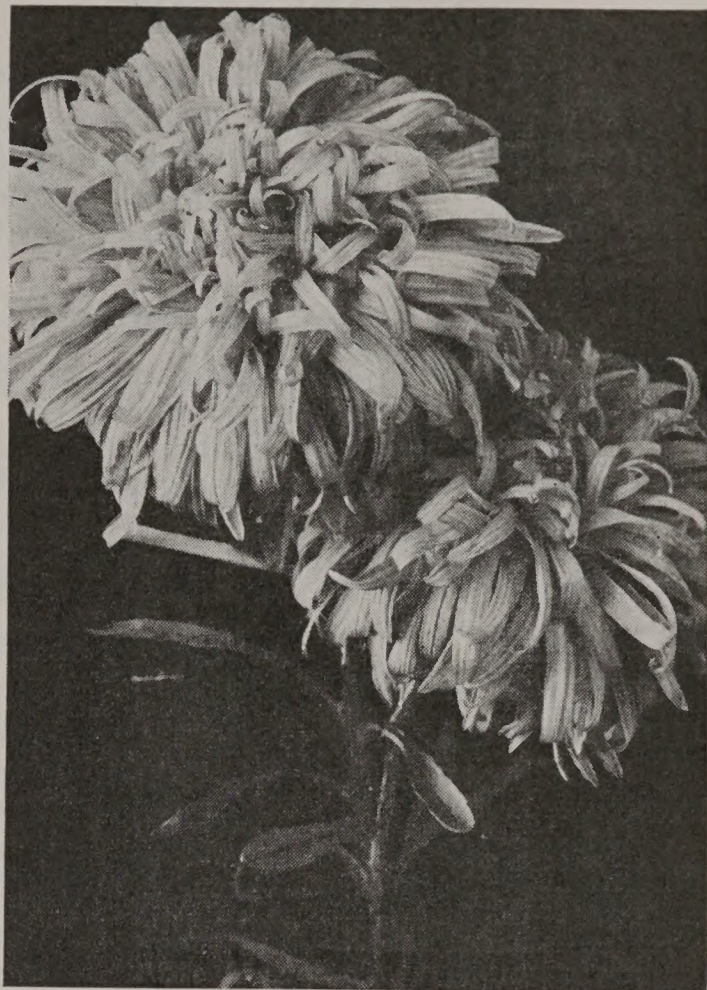

2533 Lancelot Series. A new color series—pure lilac with white bees. These unusual, individual flowers will average from 2 to 2½ in. across. **Pkt. \$1.00.**

PETUNIAS

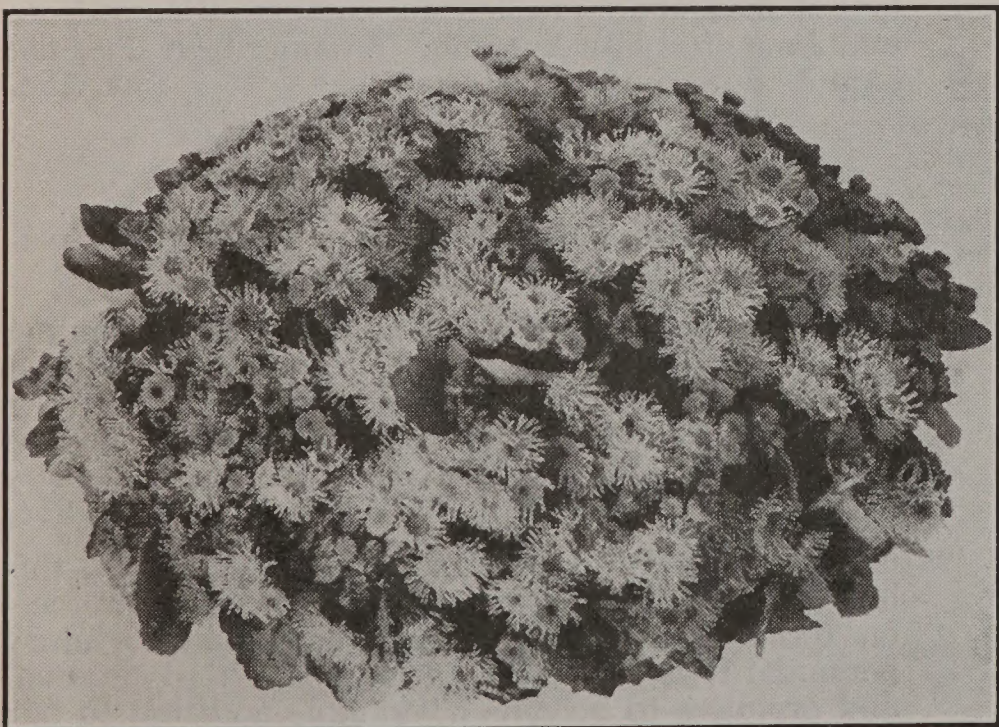

So easily grown and so adaptable to varied conditions as to earn the title "Everyman's Flower." These new varieties provide new shades that will fill a real need in the color range.

5316 Cream Star. A welcome, dwarf bedding sort with a soft, creamy-white flower of a blunt star shape. An extremely free bloomer over a long season, and a winner of the highest rating in the 1939 trials of the All America Selections. **Pkt. 25c.**

5319 Glow. 2-in. flowers of a glowing carmine red characterize this dwarf, bush variety that now commands so much attention as a plant for pot and borders. Excels all others of a similar type for richness of color. Flowers very profusely. **Pkt. 35c.**

The two following varieties, though half-hardy perennials, may easily be treated as annuals:

PERRY'S PRIZE ASTERS

Wilt most commonly occurs in the hot Midsummer months, just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The remedy is to use **Wilt Resistant Strains** that have proven so valuable that wherever available we offer them to the exclusion of others. The Aster "yellows" is quite a different disease that can best be avoided by growing your crop under cloth to prevent infestation by the insects spreading it. Unless otherwise noted, all our seed is of a **Wilt Resistant Strain**.

Perry's Bent Grass Mixture

For Those Who Appreciate Quality

A beautiful green lawn is the ambition of most home owners. Bent grasses make beautiful lawns in New England when given the necessary attention. More and more attention is being focused on Bent grasses because of the interest in golf clubs where so much Bent seed is used. To satisfy this demand we offer this mixture blended from a formula employing these fine bladed Bent grasses. Sow seed at the rate of 1 lb. to each 250.

Several times during the season broadcast $\frac{1}{2}$ oz. of sulphate of ammonia mixed with six times its bulk of finely sifted soil to each square yard of surface.

Lb. \$1.25, 5 lbs. \$5.75, 10 lbs. \$11.00, 20 lbs. \$21.00, 50 lbs. \$50.00, 100 lbs. \$98.00.

"Neu Lon" Mixture

A Mixture for the Sun without Clover

There are customers buying lawn seed mixtures who each year want White Clover omitted for their open sun locations. For these we are pleased to offer "NEU LON" as a special mixture similar to our famous Franklin Park but without clover. Use the same quantity as recommended for Franklin Park. Lb. 55c., 5 lbs. \$2.65, 10 lbs. \$5.00, 16 lbs. \$7.60, 32 lbs. \$14.75, 100 lbs. \$45.00, prepaid in New England when cash accompanies the order.

Putting Green Mixture

For Ideal and Lasting Greens

There is a growing demand for a lawn grass mixture that will produce at home a turf as fine as on putting greens of golf clubs. For various reasons it is usually safer to sow a mixture of grasses than to depend upon one grass. To meet these needs we have prepared a formula from those superior grasses employed on golf courses—of known high purity and germination that the utmost of satisfaction may be secured.

We recommend it highly and suggest when sowing to prepare the soil and fertilize it in the usual way. In order to secure even distribution, divide the seed and broadcast one-half each way of the lawn, allowing 1 lb. to every 150 to 250 square feet.

Lb. 90c., 5 lbs. \$4.40, 10 lbs. \$8.50, 20 lbs. \$16.50, 50 lbs. \$41.00, 100 lbs. \$80.00.

Perry's Seashore Mixture

Many a Lawn along the New England Shore has been grown from this mixture

A rich, green lawn is especially appreciated and desirable at the seashore, but usually conditions are decidedly unfavorable. Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures. Top soil to the depth of four inches should be broadcasted, as grass will not grow well in pure sand. The grasses used in our Seashore Mixture are adapted to unfavorable conditions, will quickly germinate in the top soil and make strong roots which will reach down into the sand for moisture. In order, however, to keep the seaside lawn in good condition it should be watered liberally each evening and also receive an occasional application of our sterilized Sheep Manure to maintain a supply of quickly available plant food. Sow 1 lb. to every 250 sq. ft.

Lb. 60c., 5 lbs. \$2.75, 10 lbs. \$5.25, 25 lbs. \$12.50.

NU-GREEN. For effective Prevention and Control of brown patch and other similar diseases on golf greens, grass tennis courts and lawns. Mix one level tablespoonful in one gallon of water to treat approximately 50 sq. ft. of lawn. 3 oz. 35c., 1 lb. \$1.45, 5 lbs. \$6.30. Circular giving complete directions free on request.

HINTS ON LAWN PREPARATION AND IMPROVEMENT

Probably we receive more requests each season for help in lawn making and improvement than on any other subject connected with gardening, so we print the following information in hopes that it will answer many of them, though we recognize that practically every lawn presents an individual problem.

Nothing can replace thorough preparation—spading deeply to loosen the soil well—raking to free it from refuse of all kinds and to pulverize it finely—careful grading—enriching sufficiently, and seeding with ample amounts of good seed.

Deep spading improves the mechanical condition of the soil, permitting the tiny roots to penetrate deeply, and secure a maximum of soil food and water. It must be finely pulverized to make a good seed bed. Top soil (preferably a sandy loam) should be spread only on properly prepared sub-soil. Rake well to carefully grade, and always uphill on banks and terraces.

If the soil is known to be sour (acid), apply Land Lime to the rough grade and rake in before spreading either fertilizer or lawn seed. As insurance against the injurious grubs of June Bugs and Japanese Beetles, dig in also 8 lbs. of Arsenate of Lead to each 1000 square feet. Broadcast at least 25 lbs. of good plant food like Bonemeal or 5-8-7 to each 1000 square feet, especially under trees.

Sow Franklin Park Lawn Seed in all sunny situations, Shady Spot elsewhere, at the rate of 1 lb. to every 250 to 350 square feet. Make sure you broadcast it evenly. (A Cyclone Seeder will save seed, time and patience on large areas.) Roll, if not sticky, with a water weight roller

to settle the seed uniformly and make the lawn smoother and more presentable. On small spaces simply raking will answer. We advise watering at night or early morning—not when the sun shines. Cut the grass frequently with a sharp lawn mower after it first gets about 3 inches high.

The right kind of a lawn is luxuriant and thick and practically free from weeds. Where do weeds in the lawn come from? Only properly sterilized soil is entirely free from weed seeds. Some may come with top-soil brought in, or from composts not thoroughly rotted, others are carried by the wind and birds, but more are sown each year in impure lawn seed. To secure a maximum of good seed and a minimum of dirt, chaff and weed seeds we urge you to buy only Perry's high grade lawn mixtures. But when weeds do appear dig them out promptly with a Sure Grip Weed Puller. (The Sure Grip is the most efficient weeder we have been able to discover. See page 47.) Scatter in small amounts of additional seed where weeds have been extracted. Always keep a package of Franklin Park Lawn Seed on hand for this purpose.

The first work in the Spring on established lawns is the removal of all litter that has collected during the Winter. (We sell several good rakes for the purpose.) With the lawn clean, fill in all hollows with good top-soil, and scatter fresh lawn seed and fertilize as for new lawns. Then while the ground is still soft, roll with a water-weight roller—one that can quickly be made heavy or light, at will, to meet conditions. The earlier this work can be done the better. A rolled lawn will be smoother and have a neater appearance, though repeated rollings may be injurious.

For additional help we recommend "LAWNS" Charles W. Parker—the best book on the subject. \$1.00 postpaid

INOCULATION FOR LEGUMES

It is a proven, scientific fact that all legumes thrive only when certain bacteria are present in the soil. Some soils may be entirely without them—these Nitrogen-gatherers. Under such conditions one may fail to get a good "catch" from seed planted. Inoculation of seed with bacteria before planting is, therefore, a sound investment and safe insurance. The cost is slight. We sell the jelly form **Legume Aid** with instructions for use in every package.

WINTER RYE

SOW IT AS A COVER CROP

There are hundreds of gardens that can be benefitted by a Fall sowing of Winter Rye. As soon as crops are harvested in September and bare spots appear, scatter it in at the rate of 5 lbs. to a space 40x40 feet, rake in and allow to grow until April when all the growth can be turned under. Not only will it produce an abundance of roots and foliage and provide a green carpet over Winter but a lot of desirable humus will be added to the soil, the fertility improved and its mechanical condition bettered. It is a logical and sensible thing to do both on large and small areas because the cost is slight and the gain great. If for no other reason than to keep down a growth of weeds after your vegetables have been gathered, Fall planting of Winter Rye even as late as November would be desirable.

Rosen Winter Rye. Lb. 15c., 5 lbs. 40c., 14 lbs. 75c., 56 lbs. \$2.50.

New Hybrid Varieties

The greatest improvement in Sweet Corn in recent years is the development of these hybrids that outyield all others and are also resistant to Stewart's disease. We caution our customers against saving their own seed for planting as Hybrid Corn will not give best results unless carefully crossed each year by experts. Plant 1 lb. to 200 hills, 12 lbs. per acre. Use 18 lbs. per acre when planted in rows.

PLANT PERRY'S HARDY LILIES

Most Lilies will succeed in any light, sandy or loamy soil, preferring an acid or a neutral soil. Plenty of Maplevale leafmold or decayed peat should be added to the soil, as practically all Lilies love leafmold. They are also partial to sharp, gritty sand. An excellent mixture is one-third loam, one-third leafmold or peat or combination, and one-third sand and well rotted cow or sheep manure.

Good drainage is an essential point. The preparation of the soil should be such as to provide ample moisture during the growing period, but without having an excess of water during the dormant period. When planting the bulbs it is well to surround them with sand or fine gravel. This helps to drain away surplus moisture and tends to repel worms.

Occasionally some Lilies do not appear above the ground the first year after planting, but come up strong and vigorous the second season.

For the most reliable information, consult **Lilies and Their Culture**. Craig. **\$3.15 postpaid.**

APPLES.

"Dormant Spray"—primarily to kill Scale.

Dilute either Scalecide, the best oil emulsion, 1 part to 15 parts of water; or Lime Sulphur, if dry, 1 lb. to 12½ gals.; if liquid, 1 to 9.

"Delayed Dormant"—when buds begin to break but not after leaves are ½ inch long, for Red Mite and Scale. Use same spray as for Dormant, but add 1 oz. Black Leaf 40 to each 6 gals. of diluted mixture for Aphids.

"Pre-Pink"—before blossoms show pink, for Scab, Bud Moth and Tent Caterpillar. Dilute Liquid Lime Sulphur 1 to 50, or Dry Lime Sulphur 1 lb. to 12½ gals. with 1 lb. Arsenate of Lead to each 30 gals. of diluted mixture. Kayso, or Hydrated Lime (Sanilime) may wisely be added to avoid a danger of burning.

"Pink"—After blossoms have separated in the cluster, but before they open, for Scab, Red Bug, Aphids, Tent Caterpillar and Leaf Roller. Same as for Pre-pink, with 1 oz. Black Leaf 40 added to each 6 gals. of diluted mixture.

"Calyx"—After 90% of blossoms have fallen. (Never spray while the fruit buds are fully

open, for you spoil the set of fruit and may poison bees). Use same materials as for Pre-pink, but increase Arsenate of Lead to 1 lb. to each 25 gals. of diluted mixture for Codlin Moth, Curculio, Gypsy Moth and Scab.

For Later Sprays—consult your Experiment Station Bulletin.

PEACHES.

"Fall Dormant"—for Leaf Curl, dilute Liquid Lime Sulphur 1 to 14, or Dry Lime Sulphur 1 lb. to 6 gals. of water.

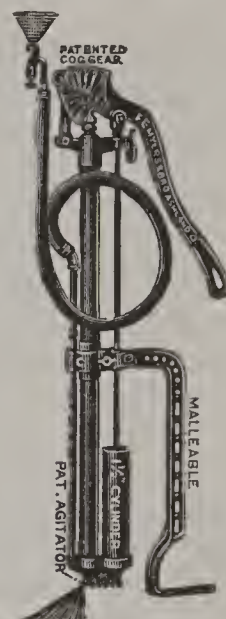

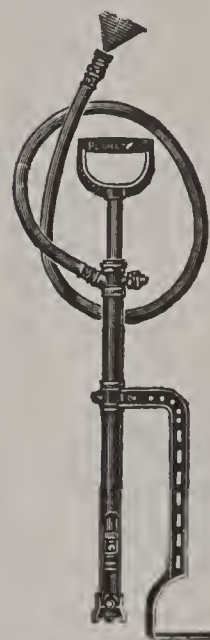

"Spring Dormant"—for Red Mite and Scale before buds start to swell. Dilute Scalecide, the best oil emulsion, 1 part to 15 parts of water.

"Pink"—for Brown Rot when blossoms show pink, use Wettable Sulphur, 1 lb. in 20 gals. of water.

"Shuck"—for Brown Rot and Scab when shucks are splitting. Repeat Pink Spray.

"First Cover"—for Brown Rot, Scab and Curculio a week or ten days after Shuck Spray use Wettable Sulphur, as in previous sprays, adding 1 lb. Arsenate of Lead and 2 lbs. Hydrated Lime (Sanilime) to each 50 gals. of water.

"Second Cover"—Two weeks after First Cover for Brown Rot, using same spray as for Pink.

GET RID OF ROSE BUGS

A writer in "Horticulture," July 1, 1938, states that she has found an absolute cure for "Rose Bugs" or beetles, those steely-gray creatures that so devastate Roses, Peonies and Grapes in late May or early June. She recommends the use of one tablespoonful of iron sulphate to each plant, worked around it but not over the crown.

Plant Foods for Successful Gardening

See Inside Rear Cover Also

All plants grow more luxuriantly when given plenty of plant food during the growing season. Most gardeners do not use enough. Broadcast it before seeding. Stir it in around trees, shrubs and other plants during the Summer. Topdress lawns early in the Spring so the rains can dissolve it for immediate show. It is well, immediately after applying chemical fertilizers to lawns, to thoroughly soak the ground with water from a hose. Follow with other applications to secure maximum results. You wouldn't want just one meal a year, would you?

WIZARD BRAND MANURES

Sterilized Natural Products—The Best to Be Had

Stable Manure is recognized as highly desirable for all kinds of crops growing on the farm, in greenhouses, or in gardens. With the decline of private stables and the removal of dairies to distant suburban districts, barnyard manure is practically unavailable to every city and metropolitan district gardener. For over 30 years we have been supplying wide-awake gardeners with Wizard Brand Manures, both Cow and Sheep, in convenient form without the objectionable features of ordinary stable manure. All Wizard Brand Manures have been heat-treated to eliminate moisture and to kill weed seeds of all kinds. They are concentrated and contain all the essential humus, between 60% and 70% organic matter, at the same time being very low in moisture content. This means their plant food is quickly available and approved by knowing gardeners. Valuable also for mulches.

PULVERIZED COW MANURE (Dehydrated). Valuable as a slow, cool, natural manure for every plant that grows in the garden. **100-lb. bags only \$3.00, 1/4 ton \$14.00, 1/2 ton \$26.00, ton \$50.00.**

SHREDDED COW MANURE (Dehydrated). Coarse in texture but entirely lacking in the disagreeable features of ordinary barnyard manure, though equally rich in humus. In great demand for composts, mulches and a cool, slow acting plant food. Preferred for Roses, under glass or outside. Ideal for the preparation of liquid manures. **25 lbs. \$1.00, 50 lbs. \$1.75, 100 lbs. \$3.00, 1/4 ton \$14.00, 1/2 ton \$26.00, ton \$50.00.**
